Professional Summary

Versatile IT professional with 8+ years of work experience in Database management, Project management, Web development, and Content management roles. Background in taking extensive and complex projects to completion through constant communication and Give-and-Take negotiations with team and business. Ability to find and improve system drawbacks, perform data-driven evaluation for content success, and come up with best solutions for business needs. I have helped an e-commerce business in increasing the sales by 40% by changing and managing the live web content, and evaluating success reports. On the programming side of IT field, I have developed a three-tier web-based application that made use of servlets and JSP to get and meet requests from the server; MySQL and JDBC were used to access and manipulate database. Apart from work projects, I have also worked on some projects in my personal time making use of MongoDB, MailChimp, and PyCharm. Frequently praised as proactive by peers, I can be relied upon to help the company achieve its goals.
